PHD THESIS

Advisor: Prof. Peh Li Shiuan, Dept. of Computer Science, NUS

Under my Ph.D. thesis, I am studying and solving problems, gaps, and bottlenecks in implementing privacy and security algorithms for wearable devices in both community sensing and remote monitoring.

First I have proposed [SeRaNDiP](#) which is a framework that leverages low-power wearable sensors' inherent noise for varying Differential Privacy noise requirements without

hardware modification. As per our knowledge, this is the first inherent noise-based Differential Privacy-providing framework applicable to existing smartwatches and fitness trackers. It resulted in 1.4X-1.8X computation/communication speedup and 1.2X-1.5X energy savings against state-of-the-art DP implementation.

Secondly, I am exploring the potential of EEG sensor noise and external environmental noise to provide privacy for users wearing EEG headsets.
